

This document is meant to test the package for errors. If this file compiles with errors or warnings, some has gone awry.

## Chapter 1

# Meta-Data Command Tests

This chapter tests the packages built-in meta-data commands (e.g., `\Title`). These commands are not directly fragile but do update fragile commands.

## 1.1 Title

Testing `\title`:

Did the `\Title` command define `\TheTitle`? This is a Title

Did the `\Title` command redefine `\TheTitle`? This is a New Title

`pdftitle=This is a Title,pdftitle=This is a New Title`

## 1.2 Author

Testing `\Author`:

Did the `\Author` command define `\TheAuthor`? This is a Author

Did the `\Author` command redefine `\TheAuthor`? This is a New Author

`pdftitle=This is a Title,pdfauthor=This is a New Author`

`pdftitle=This is a Title`

## Chapter 2

# GlobalNewIf Tests

## 2.1 Definition Checks

Test if `\GlobalNewIf` can successfully define the if-statement:

`\ifTestIfa` was successfully defined by `\GlobalNewIf`.

`\TestIfatrue` was successfully defined by `\GlobalNewIf`.

`\TestIfafalse` was successfully defined by `\GlobalNewIf`.

`\ifTestIfb` is defined through `\newif` for a scoping comparison.

## 2.2 Scope Checks

`\ifTestIfa` is set to true in the main block.

`\ifTestIfb` is set to true in the main block.

---

`\ifTestIfa` is set to false in this minipage.

`\ifTestIfb` is set to false in this minipage.

---

`\ifTestIfa` is still false after exiting the minipage.

`\ifTestIfb` has reverted back to true after exiting the minipage.
